

# Ready for 1:1 Computing in your classrooms?

Before you start, consider the following:

## Goals & Objectives

*Identifying critical success factors and assessment tools are most vital at this stage of the process*

## Financing

*The two base choices institutions must make are: "school vs. parent purchase" and "purchase vs. lease"*

## Infrastructure

*Gathering wired and wireless network, power, printing and data storage capacity requirements is very crucial*

## Hardware & Software

*Specifying the hardware is the easiest step of the process; selecting the right software should be given great consideration*

## Technology Support

*A three-year on-site warranty should be a requirement for every student or teacher-owned laptop*

## Marketing & Communications

*"Selling" the program to teachers, administrators, as well as parents and earning their buy-in is critical*

## Faculty Development

*The teachers' comfort-level with the technology will have a major impact on the success of the school's investment*

## Campus Integration

*Enhance parent, teacher, and student communication and accountability through the school's web-portal*
